

# Native Mobile App development for a Automobile Major in India

Business Need	The client, who is one of the major automobile manufacturer in India had an existing mobile application for customers to manage some of the key features of their car. The existing application was on different mobile platforms which were built using web app technologies.
Challenges	Web app based mobile versions of the app had challenges each time a new version of the OS released and new phone screen sizes was released in the market. The client had to maintain and manage different versions of the app making it a herculean task
Solution Offered	Tejasco with its wide expertise and experience suggested that the auto maker go in for native mobile platform apps (iOS and Android)
Technology Stack	Android Studio, Java, SQL-Lite, Objective C
